CupClub

An NFT membership club that turns coffee lovers into a global community

The Problem & Our Solution

Coffee loyalty is siloed per shop. CupClub gives fans and cafes one portable NFT membership, shared reputation, and real influence across a network.

- Loyalty is siloed: each cafe runs its own punch-card with no shared reputation or influence.
- CupClub issues tiered membership NFTs that work across a whole network of partner cafes and roasters.
- Members vote DAO-style on which farms or roasters get featured next, replacing one-shop guesswork.
- On-chain reputation from check-ins and reviews unlocks discounts and rare bean allocations.

How It Works

Members mint a membership NFT, engage at partner cafes, and earn on-chain reputation that unlocks perks, voting power, and rare bean access.

- Mint a tiered membership NFT via Metaplex to join the network and unlock base perks.
- Vote DAO-style in Realms on which farm or roaster gets the next featured drop.
- Check in and review at partner cafes; Anchor programs record reputation points on-chain.
- Partner cafes redeem points and discounts via QR code through Solana Pay at their dashboard.
- Trade limited bean-drop NFTs tied to physical allocations in the on-chain marketplace.

Built with

Solana, Metaplex, Anchor, Solana Pay, Next.js, Realms (DAO voting), Phantom wallet adapter

Why Now & What's Next

Token-gated communities and cheap Solana NFTs make this possible today; independent cafes need shared loyalty tools to compete with chains.

- Compressed NFTs and token-gated communities are now cheap and proven on Solana.
- Independent cafes need shared loyalty infrastructure to compete with big chains.
- Next: onboard 5-10 partner cafes to pilot the network.
- Then: launch the first community-voted limited bean drop.
- Later: add a secondary marketplace for membership tier upgrades.
